

Self-archiving policy

Nature Research's policies are compatible with the vast majority of funders' open access and self-archiving mandates.

More information is available on the [SHERPA/ROMEO website](https://www.nature.com/authors/policies/embargo.html). Nature Research actively supports the self-archiving process, and continually works with authors, readers, subscribers and site-license holders to develop its policy.

Preprints

Nature Research journals support posting of primary research manuscripts on community preprint servers such as [arXiv](https://arxiv.org/) and [bioRxiv](https://www.biorxiv.org/). Preprint posting is not considered prior publication and will not jeopardize consideration at Nature Research journals. Preprints will not be considered when determining the conceptual advance provided by a study under consideration at Nature Research. Authors posting preprints are asked to respect our policy on communications with the media (<http://www.nature.com/authors/policies/embargo.html>).

Our policy on posting and citation of preprints of primary research manuscripts is summarized below:

- The original submitted version of the manuscript (the version that has not undergone peer review) may be posted at any time. Authors should disclose details of preprint posting, including DOI, upon submission of the manuscript to a Nature Research journal.
- For subscription journals, the Author's Accepted Manuscript (authors' accepted version of the manuscript) of the manuscript may only be posted 6 months after the paper is published, consistent with our self-archiving embargo (<http://www.nature.com/authors/policies/license.html>). Please note that the Author's Accepted Manuscript may not be released under a Creative Commons license. For Nature Research's Terms of Reuse of archived manuscripts please see: <http://www.nature.com/authors/policies/license.html#terms>
- For subscription journals, the published PDF must not be posted on a preprint server or any other website. However, authors are encouraged to obtain a free SharedIt link of their paper, which can be posted online and allows read-only access. SharedIt links can be obtained by submitting the published article DOI at <http://authors.springernature.com/share>
- Preprints may be cited in the reference list as below:
babichev, S.A., Ries, J. Lvovsky, A.I. Quantum scissors: teleportation of single-mode optical states by means of a nonlocal single photon. Preprint at <http://arXiv.org/quant-ph/0208066> (2002).

Author's Accepted Manuscript

When a research paper is accepted for publication in an Nature Research journal, authors are encouraged to submit the Author's Accepted Manuscript to PubMedCentral or other appropriate funding body's archive, for public release six months after first publication. In addition, authors are encouraged to archive this version of the manuscript in their institution's repositories and, if they wish, on their personal websites, also six months after the original publication. Authors should cite the publication reference and [DOI number](#) on the first page of any deposited version, and provide a link from it to the URL of the published article on the journal's website.

Where journals publish content online ahead of publication in a print issue (known as advanced online publication, or AOP), authors may make the archived version openly available six months after first online publication (AOP).

Open access content

For open access content published under a Creative Commons licence, the published version can be deposited immediately on publication, alongside a link to the URL of the published article on the journal's website.

In all cases, the requirement to link to the journal's website is designed to protect the integrity and authenticity of the scientific record, with the online published version on nature.com clearly identified as the definitive version of record.

Manuscript deposition service

To facilitate self-archiving of **original research papers** and help authors fulfil funder and institutional mandates, Nature Research deposits manuscripts in PubMed Central, Europe PubMed Central and PubMed Central Canada on behalf of authors who opt-in to this free service during submission. (This service does not apply to Reviews or Protocols.)

More information on the [Nature Research's Manuscript Deposition Service](https://www.nature.com/authors/policies/embargo.html) is available. To take advantage of this service, the corresponding author must opt-in during the manuscript submission process. Corresponding authors should be mindful of all co-authors' self-archiving requirements.
